

Requesting Software

I am a staff or faculty member and I would like to add more software to my Glendon-managed machine. How can I do this?

Faculty and staff using Windows machines managed by Glendon can install more software on their machines by clicking on **Install More Software** via the desktop icon or they can click on the start menu and type in **Software Center** and press Enter. The computer must be connected to the network to access this service.

Once the software center launches:

1. Browse through the available software.
2. Click on the icon for the software to install it.
3. Additional information, such as if a restart is required afterwards, will be listed.
4. Click on "**Install**" to set up the software on your machine.

For machines not managed by Glendon or software not available through this method, please send a request to ithelp@glendon.yorku.ca.
